to 3 protective
systems*

EASY DIGESTION

IMMUNE HEALTH

SKIN-HAIR CARE

High quality selected Cereals and Rice, Yeasts and Dehydrated beet pulps **to improve digestibility and the absorption of active elements.**

High quality and quantity of Proteins **to help natural antibodies production** and antioxidants **to strengthen the defenses of the immune system.**

Correct supply of Vitamin A, Minerals and specific Trace Elements, **to help skin health making it sound and elastic.** Polyunsaturated fatty acids essential **for a strong and bright hair.**

**Healthy & Greedy
Nutrition System**

Protective systems and *respected physiology...*

It is understood that cats' protective systems cooperate together in **synergy**, and the bad functioning even of just one of them, can influence the good activity of the others, so that their health and overall wellness of their living body get worse.

The three cats' protective systems, as underlined before, are preserved and strengthened thanks to the action of the **nutrition system "Healthy and Greedy"** which specifically differs, in order to satisfy the different cats' physiologies.

Their age, lifestyle and the respect of their ethogram are important elements, that affect their nutrition needs.

Every nutrition profile of the products **Koccole Délice** satisfies the different requests according to the different cats' physiological states. Every formula is suitable for different requirements: for rather sedentary domestic cats and kittens, for adult cats that tend to obesity or, on the contrary, for cats that live in the open air, with a high energy expenditure. Furthermore, there are specific formulae for demanding and gourmet cats, or for cats that need a specific diet to preserve a perfect physical form, as well as for particularly sensitive cats who are intolerant to foods, or in case of cats with neophobia, with recognized dietary habits

...thanks to **Koccole Delice**

6 complete foods in 6 different formulae.

Balanced and complete food for kitten and pregnant queens or in the lactation phase.

Balanced and complete food for adult cats to keep fit.

Balanced and complete food for adult cats that live in the open air and have an intense physical activity.

Balanced and complete food for gourmet adult cats or prone to neophobia.

Balanced and complete food for sensitive adult cats with specific repulse towards food and for delicate long-haired cats.

Balanced and complete food for sedentary adult cats prone to obesity and for neutered or spayed cats living indoor, with stomach hairball problems.

Healthy & Greedy

The exclusive system “**Healthy & Greedy**” is a perfect combination of macro and micro high quality nutrients.

Their careful selection is supervised by an organized quality control system every day.

The team is composed of expert nutritionists who guarantee the quality of raw materials and of the production processes and give also their approval to the finished products once all production processes are over.

Special ingredients

The ideal choice for your cat

Koccole Delíce products are the ideal food for all adult healthy cats and for growing kittens, in the full respect of their ethogram. **Special ingredients and controlled levels of vitamins, minerals and trace elements**, formulated according to specific nutritional needs, **satisfy your cat, keeping him in optimal health through his different life stages**, helping his longevity and overall wellness. Here below are featured the 5 most important elements of our formulae (first ingredients) and related benefits:

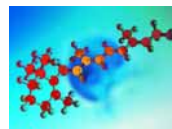

1 PROTEINS OF ANIMAL ORIGIN OBTAINED FROM DEHYDRATION OF SELECTED POULTRY, CATTLE AND FISH MEATS. Excellent proteic sources at high biologic value bring high digestibility and intestinal absorption and also a high nutritional supply. Meat freshness and healthiness, as main proteic sources, are guaranteed by the closeness of the Company Gheda Petfood to slaughtering sites.

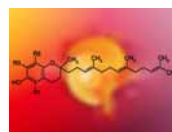

2 CARBOHYDRATES FROM RICE. Rice is the main carbohydrates source, it is easily absorbable from the living body and is effective as anti-uric. Rice supplies a good percentage of calories (350 every 100g), a small quantity of vegetable proteins (7g every 100g) and a good percentage of hydrates of carbon (80g every 100g). Among its vitamins prevail the PP, B1 and B2, while among minerals prevail iron, phosphorus and calcium.

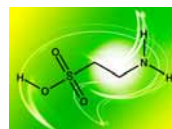

3 VITAMIN A. The activity of Vitamin A is the synthesis of proteins. It helps and supports nutrition as well as growth and the vital activity of all organic tissues, especially the epithelial one, the mucous membranes, eyes, and the corneal tissue. It supports also the immune and reproductive systems.

4 VITAMIN E. Vitamin E is one of the most active elements against free radicals coming from oxygen. It is effective for cardiovascular diseases, it is essential for the proper muscles functioning, improves the immune system and it is necessary for an adequate reproductive system functionality. The alpha-tocopheryl acetate, if it is well transmitted, it is certainly absorbed by skin and it has a hydrating, anti-inflammatory, and soothing action.

5 TAURINE. Taurine is an essential amino acid. Taurine plays a fundamental role in biliary acids synthesis, it is important for cardiovascular diseases and for macular degeneration. Taurine is particularly concentrated in white blood cells, skeletal muscles, heart and central nervous system.

More taste...

Liver hydrolized proteins and high quality animal fats guarantee high digestibility to the whole range of products that Le Koccole Delice line presents in different tastes.

The high level of appetibility increases the spontaneous product consumption and cats' appreciation helps the correct food taking, according to the suggested tables: for their health maintenance and the good functioning of their immune defenses.

Also **the palatability** determines the spontaneous consumption of the products, **giving a favourable stimulus**. Appetibility depends on several factors; let's mention the most important ones:

- 1) Food factor
- 2) Environment factor
- 3) Individual factor

The new line Koccole Delice whets the appetite of your cat and...

...with **Koccole Delice**

Food factor

It is the most important factor. **Quality and freshness of ingredients make the difference** and this factor is absolutely fundamental as key to success. With Koccole Delice products **the requirements here below are always observed** and maintained according to Gheda Petfood Lab's strict technical specifications:

- Selection of fresh and high quality ingredients.
- Ergonomic conformation of croquettes, suitable to cat's age and size.
- Ideal consistency.
- Recipes formulated with accuracy and production process that keeps food organoleptic quality unchanged.
- External icing.

...makes him feel
always fit!
